| Description | An aluminum blind fastener which has a self-contained mechanical feature (a mandrel) which permits the formation of an upset on <br> the blind end of the rivet and expansion of the rivet shank during rivet setting to join the component parts of an assembly. The <br> aluminum mandrel is pulled into or against the rivet body, breaking at or near the junction of the mandrel shank and its upset end. <br> The dome head is slightly rounded and twice as wide as the body diameter. |
| :---: | :---: |
| Applications/ <br> Advantages | Dome head is the most commonly specified head style because of its low profile and neat, finished appearance. <br> Aluminum/aluminum rivets have the lowest tensile and shear values of all break mandrel rivets. They should be used when <br> fastening materials with similar mechanical and physical properties. |
| Material | Rivet: Aluminum Alloy 5050 or 5052 or equivalent alloy. Rivets have no additional finish except for sizes \#42 \& 44 which are also <br> available painted white. <br> Mandrel: Aluminum Alloy $7178,7075,5056$ or 2024 or equivalent alloy. |
| Shear Strength | Rivets shall have ultimate shear loads not less than the minimum ultimate shear loads specified for the applicable size given in the |
| above table. |  |
