| Description | A thread cutting screw with machine screw thread pitch, blunt point, tapered entering threads and multiple cutting edges. |
| :---: | :---: |
| Applications/ Advantages | Steel thread-cutters are used in heavy gauge sheet metal, aluminum, zinc and lead die castings, cast iron, brass and plastic. Stainless screws offer additional resistance to corrosion, 18-8 moreso than 410 . When using any thread-cutting screw, the material in which the threads are cut should have a lower hardness by at least 10 to 20 Rockwell hardness points. |
| Material | Steel: AISI 1016-1024 or equivalent steel. Stainless: 410 martensitic stainless steel or 18-8 stainless steel. |
| Heat Treatment | 410 Stainless: Screws shall be annealed by heating to $1850-1950^{\circ}$, held at least for $1 / 2$ hour and rapid air- or oil-quenched then reheating to $525^{\circ} \mathrm{F}$ minimum for at least 1 hour and air cooled to provide the required tensile, yield and hardness properties. |
| Surface Hardness | Steel: Rockwell CA5 minimum |
| Case Depth (steel) | No. 4 thru 6 diameter: . $002-.007$ <br> No. 8 thru 12 diameter: . 004 - . 009 <br> 1/4" diameter \& larger: . $005-.011$ |
| Core Hardness | Steel (after tempering): Rockwell C28-38 410 Stainless: Rockwell C38-42; 18-8 Stainless: Rockwell B90-C20 |
| Plating | See Appendix-A for information on plating of steel thread cutting screws. |
